

Privacy & security > Location

Windows can use your device's capabilities like GPS or Wi-Fi to determine your location. Microsoft might use location data to improve the accuracy of its location services. Some desktop apps might not appear on this page or be affected by these settings. [Learn more about location](#)

Location services

Location is turned off and Windows and other users on this device will not be able to use location

Off

Let apps access your location

All apps can access approximate location, but you can choose which apps can access your precise location

Default location

Windows, apps, and services can use the default location when we can't detect a more precise location

Set default

Allow location override

Windows, apps, and services can use the location from a remote connection instead of this device's location

On

Recent activity

Review location access from the last 7 days. The most recent access data is also captured in other sections in this page
